## TECHNICAL PROJECTS

### BODY MASS INDEX (WEB APP)

SEM 1, 2020

- Designed and developed a Web application that lets a user check the BMI by entering their Height and Weight.
- The User can choose between International or US metric system.
- The App displays effects of being in the certain BMI category depending on the BMI results.
- Used HTML/CSS/Javascript on the Client-side and Node.js on the server end.
- [Click here for site hosting link \(Github Repository link is in the Header\)](#)

### MOTOR VEHICLE REGISTRY (Front-End)

SEM 1, 2021

- This project was a part of unit HIT226, and we were required to work on improving a government service.
- Allows the user to easily navigate and find the required services.
- Developed from scratch using HTML/CSS/Javascript.
- [Click here for site hosting link \(Github Repository link is in the Header\)](#)

### E-COMMERCE WEBSITE

Dec 2021

*Freelancing*

- The website to be released in March sells Clothing and other fashion items.
- Fully functional back-end and includes an integrated Payment system.
- No Permission from the owner to share it and use it as my project.

### PYTHON CHAT APP

Currently working

- Coded the Client and Server side using Socket Programming, Plan on making this a group chat and will add SQL for chat storage.
- [GitHub Repository link:](#)

## EXPERIENCE
